Projects

Accessible Travel https://accessibletravel.herokuapp.com/
This site provides parents of individuals on the Autism Spectrum with a community to share ideas, plan trips with other families, review destinations, and explore travel options.
This project used the following applications: REACT/Modals, Materialize,REACT/Google Maps, Mongo, Express, React, Node JS, Google Maps, Firebase, and OTA.

Flower Memory Game   https://flowermemorygame.herokuapp.com/
There are twelve pictures on the page. Click on a picture to get 1 point. After you click, all of the pictures will shuffle. Click on a new picture. How many pictures will you click on without repeating? If you click on a picture 2 times, the game is over!
This game uses React, JSON, and Javascript.

Project Out N Go https://kimberlyhoward.github.io/projectOutNGo/
This project is for hikers to find hiking trails within 200 miles of a location. The app also includes a forecast for the weather and a level of difficulty.
We used the Hiking Project API and Weather Underground API .
